

VAPOR LOCK™

AdventHealth South Overland Park is an 85-bed 193,000 sqft hospital designed to serve a growing community. It features a new birth center, cardiac care, surgical services, and a dedicated labor and delivery floor. Additional facilities include sterile processing, food and nutrition services, a pharmacy, a lab, and an intensive care unit.

Vapor Lock 20/20 is a leading risk management tool for health care projects. Our concrete admixture prevents moisture related floor covering failure and facilitates the timely installation of flooring. Each project receives a \$20M insurance policy accompanying the 10 year labor and material warranty against moisture related failure or adhesive bond loss.
