

VAPOR LOCK™

Vapor Lock 40/40 Corrosion Inhibiting & Waterproofing Concrete Admixture was selected for the new Marine Barracks at Camp Blaz in Guam to enhance longevity and safeguard critical infrastructure. This admixture serves as a robust corrosion inhibitor while providing water and vapor proofing for concrete. Its corrosion-resistant protection is a permanent, self-healing nanotechnology, integral to the concrete's final structure. Key benefits include the near elimination of steel reinforcement oxidation and effective concrete waterproofing, ensuring durability and resilience in this demanding environment.
