

VAPOR LOCK™

Tech giant Google opened its renovated campus in Ann Arbor, consolidating its employees under one roof. The expansive 135,000-square-foot campus not only enhances workspace efficiency but also fosters collaboration among the 450 employees based in Michigan, reflecting Google's commitment to growth and innovation in the region.

Vapor Lock 20/20 was incorporated into the design of this project to ensure the timely installation of flooring and prevent future moisture related flooring failure. Vapor Lock also improves indoor air and environmental quality by preventing a major source of moisture from entering the occupied space.
