

VAPOR LOCK™

SPECIALTY
PRODUCTS
GROUP®

Vapor Lock 40/40 Corrosion Inhibiting and Waterproofing Admixture was chosen for the Greens Port Industrial Terminal project in Houston, TX. Utilizing VOC-free proprietary technologies, the admixture serves as a powerful corrosion inhibitor for reinforcing steel while ensuring water and vapor proofing which is critical for this marine environment.

Additionally, Vapor Lock 40/40 provides extreme densification to withstand heavy loads, improves workability, and does not affect set time. More importantly, it acts as an internal curing agent, managing hydration water minimizing shrinkage cracking and slab curl.
