

Kansas State University's Bill Snyder Stadium has undergone a significant transformation with the introduction of the Shamrock Zone in the South Endzone. This project enhances the gameday experience by offering upgraded fan amenities, a luxurious new club space, and premium seating options. The renovations aim to create a more engaging and comfortable environment for fans.

**Vapor Lock 20/20** concrete admixture was selected to protect this valuable campus asset and ensure the timely installation of flooring. Our leading moisture mitigation technology renders concrete impermeable and prevents concrete moisture related flooring and roofing failure.
