

The MU Health Care Children's Hospital is a nine-level concrete structure integrated with an existing patient care tower, enhancing service delivery for both adults and children. Designed for flexibility, patient rooms accommodate families and incorporate advanced technology for adaptability based on patient needs.

Vapor Lock 20/20 is a leading risk management tool for health care projects. Our concrete admixture prevents moisture related floor covering failure and facilitates the timely installation of flooring. Each project receives a \$20M insurance policy accompanying the 10 year labor and material warranty against moisture related failure or adhesive bond loss.
