

VAPOR LOCK™

Vapor Lock Concrete Admixture has been included in **20 schools** totaling over 3 million square feet with Wake County Public School System in North Carolina. Previously, The school district experienced significant delays in opening a school due to concrete moisture levels not reaching flooring manufacturer standards forcing them into costly topical remediation.

To prevent any unnecessary future delays and expenditures, the school district spends a tenth of the cost of topical remediation for **Vapor Lock** and experiences no delays with flooring.
